

We all know
compliance
is complex.

What we do

We use machine automation to transform regulatory data into regulatory intelligence and ensure relevancy to the customer across multiple business areas

Who we are

We are a global RegTech provider empowering regulated financial institutions to meet cross-border compliance challenges head on.

We know that compliance is complex, so we work with the world's leading financial institutions to simplify their compliance challenges. We capture regulatory data from across the globe, process it and transfer it into highly contextualized and meaningful regulatory intelligence for our global customers.

We apply leading techniques in machine learning, natural language processing and robotic process automation to make complete sense of regulatory data and tailor it to our customer's profiles.

Why we're here

In the wake of the financial crisis, we were quick to envisage the future for regulated financial institutions. Everything had to change...

CUBE was founded with change in mind.

We saw that the future of finance was rooted in immense volumes of regulations, innumerable rules, and a relentless pace of regulatory change. Compliance teams that continued to use existing legacy and manual processes would be left with incomplete and out of date inventories and controls, whilst still incurring large resource costs.

With these challenges in mind, we started a movement to leverage machine learning and automation to understand what every financial institution needs to do to ensure compliance in real time; to take regulatory data and transform it into meaningful regulatory intelligence. The result? Our customers can focus on executing necessary changes rather than spending time and resources working out what to do and where to do it.

Relevance

Filter out noise and focus solely on the data that matters with an intelligent product that decodes the 1% of regulatory content relevant to your business. Receive deeper insights into your regulatory obligations with a single platform mapped to your business taxonomies.

Rate

Using leading techniques in artificial intelligence, like natural language processing and robotic process automation, our machines do the work of a million compliance professionals: reading, interpreting and mapping the regulatory internet in real time, in every language, and mapping that to our customer's organisations.

Risk

Free up time and resource by eliminating manual processes and the risk of regulatory failure. CUBE is the market standard and provides a path for our customers to rapidly save millions and mitigate lost billions in fines and reputational damage.
